PROFESSIONAL SUMMARY

Business and Data Analyst with 3 years of experience in healthcare and IT services, skilled in SQL, Python, Power BI, Tableau, and ETL pipelines. Experienced in gathering requirements, writing BRDs and user stories, and building KPI dashboards that reduced reporting time by 10 hours per week. Applies Scikit-learn, hypothesis testing, and Generative AI tools (Copilot, ChatGPT) to improve data accuracy, forecast demand, and support decisions with stakeholders in Agile teams.

SKILLS

Programming & Databases: Python, SQL (MySQL, SQL Server), R, MongoDB, Jupyter Notebook
Data Processing & Cloud: Pandas, NumPy, SSIS, ETL Pipelines, AWS (S3, Lambda), Azure (Data Lake, Databricks), Snowflake, BigQuery
Machine Learning & Statistics: Scikit-learn, TensorFlow, Regression Analysis, Decision Trees, Random Forests, Predictive Modeling, Time-Series Forecasting, Hypothesis Testing, A/B Testing
AI for Data & Business Analysis: Generative AI (ChatGPT, Claude, Copilot), Prompt Engineering, NLP (Sentiment Analysis), AI-Assisted Data Cleaning & Reporting, Microsoft Copilot (Power BI, Excel), Responsible AI & Data Ethics
Visualization & BI: Tableau, Power BI (DAX, Power Query, Copilot), Looker, Advanced Excel, KPI Dashboards, Data Storytelling
Business Analysis & Management: Requirements Gathering, BRD/FRD & User Stories, Gap Analysis, Root Cause Analysis, UAT & Test Cases, KPI Definition, Cost-Benefit Analysis, Stakeholder Management, Agile/Scrum, Sprint Planning, Risk Management
Data Governance & Tools: Data Cleaning & Transformation, Data Quality, Data Integration, Git/GitHub, JIRA, Confluence

WORK EXPERIENCE

Business Analyst, Pro RX Inc, United States **June 2026 - Present**

- Analyzed prescription fulfillment data in SQL Server to find refill-processing delays across pharmacy workflows, then recommended queue and handoff changes to operations leads, reducing average turnaround time by 18%.
- Built Power BI dashboards (DAX, Power Query, Copilot) tracking refill rate, claim rejection rate, and inventory turnover, using Copilot-generated insights and natural-language queries to replace manual Excel reports and save 10 hours per week for stakeholders.
- Documented requirements in BRDs and user stories in JIRA and Confluence for a claims-processing workflow update, then led UAT with 25 test cases in Agile sprints, using Generative AI to draft test scenarios and acceptance criteria, reducing post-release defects by 30%.
- Streamlined documentation with Microsoft Copilot, ChatGPT, and prompt engineering to summarize stakeholder meetings, draft SQL queries, and flag data inconsistencies, cutting documentation time by 25% while keeping PHI out of prompts per HIPAA.

Data Analyst, Sphinx Worldbiz Limited, India **February 2022 – July 2023**

- Spearheaded ETL pipeline development in Python and SQL on Azure Databricks, loading CRM, sales, and project data into Azure Data Lake and Snowflake, integrating 5 source systems and cutting manual data preparation from 12 hours to 2 hours per week.
- Strengthened data quality by standardizing 50K+ CRM records with Python (Pandas) and SQL, removing duplicates and fixing missing values, which raised data accuracy from 82% to 97%.
- Enhanced reporting by designing Power BI KPI dashboards that track lead conversion, sales pipeline, and JIRA project delivery status, replacing manual Excel reports and saving managers 8 hours per week.
- Improved lead prioritization by training a Scikit-learn Random Forest model on historical CRM data, reaching 78% accuracy and raising lead conversion by 10%.
- Classified customer feedback and support tickets with Python NLP sentiment analysis to identify top complaint themes, leading the product team to fix 3 recurring issues and reducing negative feedback by 15%.

Junior Data Analyst, Sigma Tech Solution, India **January 2021 – January 2022**

- Automated daily data loads from MySQL and CSV files into AWS S3 using Python (Pandas, NumPy) and AWS Lambda, integrating client project, billing, and support ticket data and cutting manual report preparation from 6 hours to 1 hour per week.
- Investigated 80K+ support ticket records through EDA in Python and MySQL, confirming with hypothesis testing (t-test) that tickets assigned after 5 PM took longer to resolve, which led the team to adjust shift coverage and reduce average resolution time by 12%.
- Forecasted monthly support ticket volume with Scikit-learn and time-series methods, reaching a 9% MAPE and helping managers plan staffing, which reduced overtime hours by 10%.
- Presented sales and project performance insights to department heads through Tableau dashboards and Advanced Excel reports, using data storytelling and Confluence documentation to replace manual reports and cut ad hoc report requests by 30%.

PROJECTS

Sales Performance Dashboard | *Power BI, DAX*

- Built a Power BI dashboard to track sales performance, revenue trends, and product insights, improving reporting efficiency by 35%.
- Created DAX-based KPIs for business performance tracking, reducing manual effort by 30% and improving data accuracy by 20%.

Conversational Data Analysis | *Python, SQL*

- Analyzed structured and semi-structured datasets using Python and SQL, identifying trends and performance metrics, improving insight generation speed by 30%.
- Applied data cleaning and transformation techniques, enhancing data usability by 40% and reducing reporting errors by 25%.

EDUCATION

Master of Science in Information Systems | Pace University, New York, USA **May 2025**
